Functional Enhancements for Dynamics CRM

so easy even a marketing manager could do it

Web2CRM

**Get website form data into
CRM really fast!**

Start using online forms today!

Web2CRM allows Microsoft Dynamics CRM 4.0 customers to integrate form submission from their website into data records in their CRM system.

New Features

- Multiple forms per CRM entity. Create audience specific webform layouts.
- HTTPS secure socket layer option. Place forms on secure web pages on your site.
- Pass CRM record Lookup GUID values to link form data to records in CRM, such as Campaign Responses, Cases, and Contacts/Accounts. Build forms using static or dynamic record links to CRM.
- Improved error handling provides more user feedback during form data entry.

It's that easy!

Build and publish a form in less than 10 minutes without any programming.

This solution works with all implementation scenarios of CRM 4.0 – Online, OnPremise, Partner Hosted.
